How to Use It as a Button

IntroductionThis guide explains how to set up and use a UI Button in Unity, referencing the provided images. It covers adding a button, assigning it in the Inspector, and triggering its function via scripts.

Selecting the Genre Script

There are 13 different genre scripts available for different text effects. For this guide, I will use AdventureSingleTextEffect, but you can choose any genre script available in the Scripts folder.

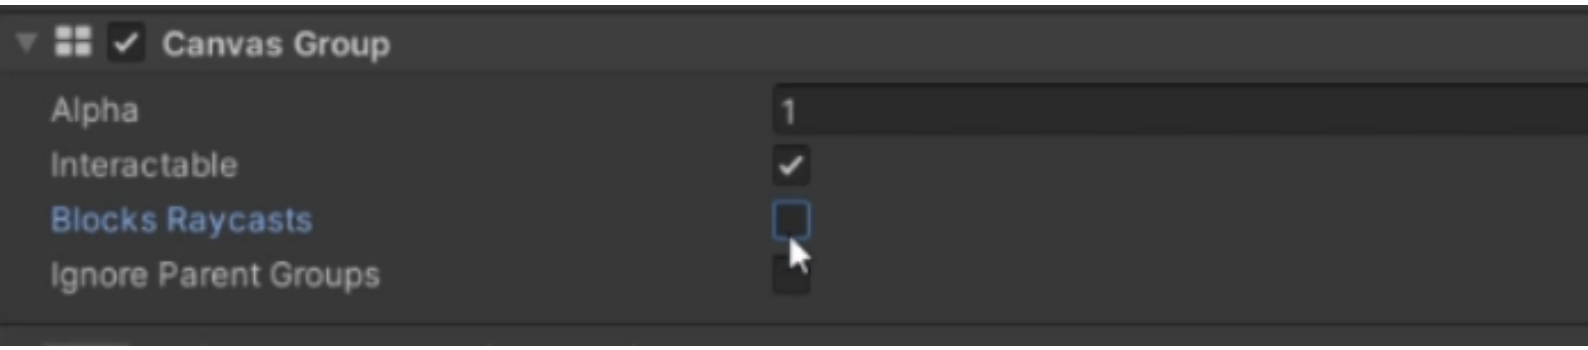

Add a Button to the Scene

Add Canvas Group to Button

Check the Canvas Group settings

Interactable should be checked.
Blocks Raycasts should be disabled.

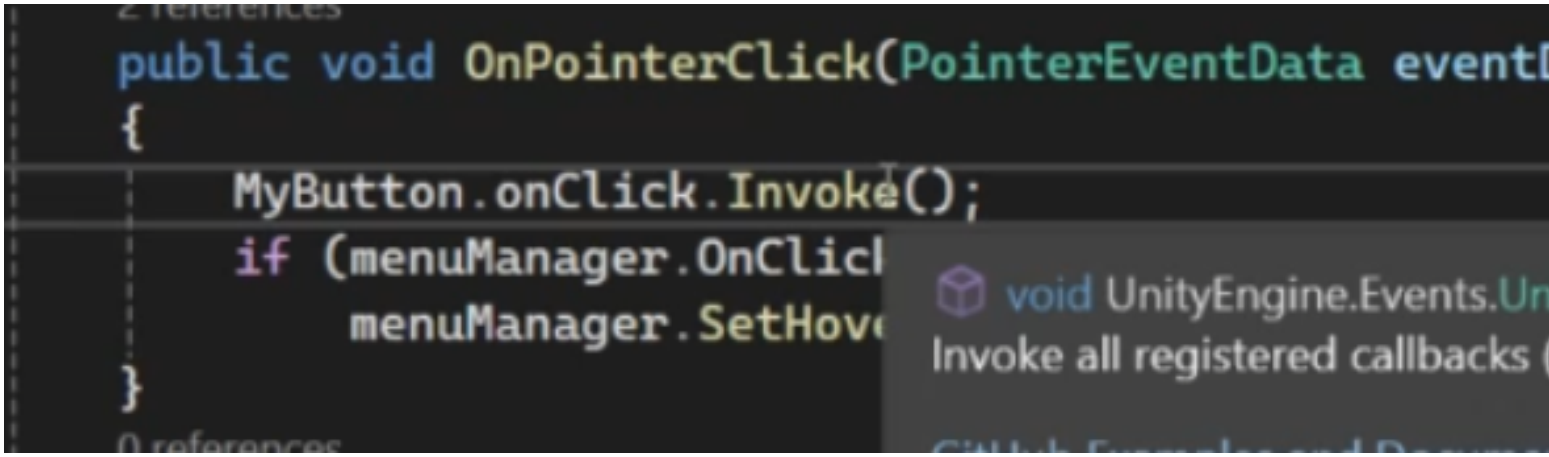

Ensure the Button's Image component is visible and not fully transparent

Setting Up the Button Click Event

In the script MenuItemAdventureSingle, declare a Button variable:
public Button MyButton
Assign a function to trigger on button click:

Drag and drop the Button from the Hierarchy into this field.
